

February 26, 2026

The Honorable Nick Langworthy  
United States House of Representatives  
422 Cannon House Office Building  
Washington, DC 20515

Dear Representative Langworthy:

We are writing to thank you for introducing the Recycled Materials Attribution Act (RMAA) and for your leadership in advancing clear, consistent standards for recycled-content claims in the United States.

Today, manufacturers and consumers alike face a patchwork of conflicting state definitions and requirements governing recycled materials and environmental marketing claims. These inconsistencies create confusion for consumers, increase compliance costs for businesses, and discourage investment in innovative recycling technologies. The RMAA addresses these challenges by establishing clear, nationally consistent definitions while directing the Federal Trade Commission to modernize its Green Guides accordingly.

By providing regulatory clarity and uniformity, the RMAA will help expand the supply and use of recycled materials, support innovation in recycling technologies, and ensure consumers receive accurate and transparent information about the products they purchase. The legislation will also encourage domestic investment in recycling infrastructure, strengthen U.S. supply chains, and support the creation of good-paying American manufacturing jobs.

Thank you again for your leadership on the Recycled Materials Attribution Act. We appreciate your commitment to reducing consumer confusion, strengthening domestic manufacturing, and supporting a more efficient and circular recycling system.

Sincerely,
